Re: Application for Front End Software Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Front End Software Engineer, Consumer Engineering position at Reddit. I hold a B.Sc. in Computer Science and Engineering from Mawlana Bhashani Science and Technology University and specialize in building modern, performant, and responsive web applications using React.js, Next.js, TypeScript, and REST APIs.

Through my work on production-grade projects like YourRENT and YourDelivery, I have driven full-lifecycle web development with a focus on user experience and technical excellence. On YourRENT, for instance, I built a responsive, mobile-first rental marketplace using Next.js 16 App Router, TypeScript, and Tailwind CSS, featuring debounced property search filters, typed service layers, and unit/E2E testing for authentication workflows. On YourDelivery, I engineered intuitive customer and administrative dashboards, ensuring seamless client-side state management and efficient REST API integrations.

I am inspired by Reddit's mission to connect millions of users across authentic communities. My solid technical foundation in modern frontend stacks, commitment to clean architecture, and product-minded approach align well with Consumer Engineering's goal of scaling core user journeys. I look forward to the opportunity to contribute to Reddit's web products.

Sincerely,

Abdullah Muhammad Siam
