Hiring Manager
Crossing Hurdles

Re: Application for JavaScript Software Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Code Reviewer - Javascript position. I hold a B.Sc. in Computer Science and Engineering from Mawlana Bhashani Science and Technology University and specialize in JavaScript, TypeScript, Node.js, containerized environments with Docker, and software testing methodologies.

Through my work on complex web application codebases like YourRENT and YourDelivery, I have hands-on experience setting up development environments, configuring Docker containers, and writing unit/E2E testing suites to verify code reliability. On YourRENT, for instance, I structured a multi-role web platform using Express.js and Next.js, implementing typed service layers, automated test cases covering authentication, and Docker-compatible workflows. Furthermore, my training in AI-driven software engineering tools and active use of LLMs for code generation and debugging give me practical insights into evaluating LLM performance against real-world repositories.

I am excited about the opportunity to analyze open-source codebases and contribute to LLM testing and evaluation workflows. My solid computer science foundation, proficiency in JavaScript and Git, and experience with AI/LLM research tooling prepare me to deliver high-quality code reviews for your team.

Sincerely,

Abdullah Muhammad Siam
