Hiring Manager
Lab3

Re: Application for Full-Stack Developer

Dear Hiring Manager,

I am interested in the Full-Stack Developer position at Lab3. I hold a B.Sc. (Engg.) in Computer Science and Engineering and have practical full-stack development experience through personal projects using React, Next.js, TypeScript, Node.js, Express.js, and PostgreSQL. I focus on building structured, maintainable applications and solving practical development challenges.

Through YourDelivery and YourRENT, I have implemented REST APIs, JWT authentication, role-based access control, database-driven workflows, and Stripe payment integrations. These projects strengthened my understanding of backend architecture, database design, reusable components, debugging, and secure application development.

I am particularly interested in Lab3's emphasis on product ownership, maintainable code, and AI-assisted development. I am motivated to expand my knowledge of Firebase, Firestore, and LLM integrations while contributing to real-world applications. I would welcome the opportunity to bring my existing skills and learning mindset to your team.

Sincerely,

Abdullah Muhammad Siam
