Hiring Manager
SaskIT Inc

Re: Application for Software Developers

Dear Hiring Manager,

I am interested in the Junior Software Developer position at SaskIT Inc. I have a B.Sc. background in Computer Science and Engineering and hands-on experience developing full-stack applications using JavaScript, TypeScript, React, Node.js, Express.js, and PostgreSQL.

Through my projects, YourDelivery and YourRENT, I implemented REST APIs, JWT authentication, role-based access control, database workflows, and Stripe payment integrations. I also wrote unit and end-to-end tests and deployed applications using Vercel. These projects strengthened my understanding of application architecture, secure access management, and practical software development.

SaskIT's focus on secure, self-hosted software and its emphasis on code quality, testing, and continuous learning particularly interest me. I would welcome the opportunity to contribute my existing development skills while expanding my knowledge of Laravel, Python, Docker, and modern testing practices within your engineering team.

Sincerely,

Abdullah Muhammad Siam
