Hiring Manager
U DEVS

Re: Application for Full Stack Engineer

Dear Hiring Manager,

I am applying for the Full Stack Engineer position at U DEVS (SMC-PRIVATE) LIMITED. I have a B.Sc. background in Computer Science and Engineering, with hands-on experience building full-stack applications using React, Next.js, Node.js, Express.js, TypeScript, MongoDB, and PostgreSQL.

Through my projects, YourDelivery and YourRENT, I developed REST APIs, JWT authentication, role-based dashboards, database workflows, and Stripe payment integrations. I also implemented responsive interfaces, dynamic filtering, pagination, and automated tests. These projects strengthened my understanding of full-stack application development, backend architecture, and database management.

I am particularly interested in U DEVS because of its focus on AI-powered products and modern software development. I am eager to expand my knowledge of Python, RAG, and Agentic AI while contributing my existing full-stack development skills. I would welcome the opportunity to learn, take ownership of real projects, and grow with your engineering team.

Sincerely,

Abdullah Muhammad Siam
